

ABSTRACT OF THE DISCLOSURE

A system for utilizing water originating from an air conditioning system in order to supply water to an automobile windshield wiper system, includes air conditioning generating equipment for an automobile, the air conditioning generating equipment including a compressor, a condenser and an evaporating compartment; a water-collecting container positioned below a level of the evaporating compartment; first tubing for connecting the evaporating compartment to the water-collecting container to supply water from the evaporating compartment to the water-collecting container; second tubing for connecting the water-collecting container to a windshield wiper system of the automobile; and a pump for pumping the water from the water-collecting container to the windshield wiper system through the second arrangement.
